Ref: PHP Update
Date: 26th October 2026

Subject: Updated Statement regarding the recent PHP security vulnerabilities

NEC Software Solutions is aware of the recently disclosed critical PHP vulnerabilities and has been actively assessing our infrastructure, products and services to identify and address any potential exposure.

The majority of our systems do not use the affected technology. For those systems that do, we have completed patching or are applying updates as a priority.

Where patching is still in progress, systems have been isolated, taken offline or otherwise protected until remediation activities are complete.

Alongside patching activity, we have implemented additional protective measures across our environment. These include perimeter security controls designed to prevent exploitation of the vulnerabilities, enhanced monitoring and alerting to identify any attempted malicious activity, and ongoing security reviews to validate the effectiveness of our response.

Based on our investigation, monitoring and security assessments, we have identified no evidence that NEC Software Solutions systems or customer data have been compromised as a result of these vulnerabilities.

We continue to monitor the situation closely and will take any further action required to maintain the security, integrity and availability of our services.

Yours sincerely,

Matt Harris
Chief Technology Officer
